

ENVIRONMENTAL POLICY

SOS Gas Services is committed to the protection of the environment in all aspects of its operation.

In particular the dual areas of conservation and the minimisation of pollution are integrated into the working methods of the organization.

SOS Gas Services promotes energy conservation, uses the cleanest, most efficient energy sources available (where applicable) and gives full consideration to the energy used in the delivery of services.

Consumption is reduced wherever possible and goods are purchased from sustainable sources, which are not harmful to health or the environment and have potential for re-use or recycling.

The company employs the best environmental option for dealing with waste.

All individuals in the business will: -

- Minimise the use of raw materials
- Use recycled materials wherever possible
- Minimise the use of all energy sources
- Recycle as many materials and products as is reasonably possible
- Work only with other organisations committed to minimising their impact on the environment
